

FAZIL KHAN

Backend Developer | Java & REST API Development | Data Structures & Algorithms | Database Design
Bengaluru, India | +91-7676694554 | fazilkhan624221@gmail.com | github.com/fazilkhan2106 | linkedin.com/in/fazilkhan21

PROFESSIONAL SUMMARY

MCA graduate with a strong foundation in Java, Data Structures & Algorithms, and Object-Oriented Programming, focused on backend and database-driven development. Experienced in designing REST APIs and working with MySQL and MongoDB to build modular, maintainable application logic, with hands-on exposure to Generative AI concepts through applied certification. Solved 80+ DSA problems on LeetCode and holds a 4-star Java rating on HackerRank. a strong problem-solver eager to build reliable, scalable backend systems.

TECHNICAL SKILLS

Languages: Java, Python, C

Backend & Databases: REST APIs, MySQL, MongoDB, API Integration, Modular Application Design, JSON/CSV Data Handling

Core CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks, DBMS, System Design Basics

Tools & Practices: Git, GitHub, Linux, VS Code, Postman, Debugging, Code Optimization, Performance Tuning, Version Control, Automation

Frontend (Supporting): HTML, CSS, JavaScript, React Native

PROJECT EXPERIENCE

Wander Genie — AI Travel Planner

TypeScript, JavaScript, Google APIs, React Native, MongoDB | Jul 2025 – Dec 2025 | github.com/fazilkhan2106/WANDERGENIE

- Designed the application logic and MongoDB data models powering a full-stack travel-planning app, cutting user trip-planning time by 60%.
- Built server-side data-processing pipelines in TypeScript/JavaScript to validate and handle dynamic user inputs and preferences.
- Integrated multiple third-party APIs (Google APIs) to automate itinerary generation and extend backend functionality.
- Applied modular design principles to keep the data layer and business logic scalable and maintainable as features grow.

AI Web Scraper

Python, Automation, Data Processing | Jan 2025 – Mar 2025 | github.com/fazilkhan2106/AI-WebScraper

- Built an automated Python system to extract, process, and structure large-scale web data, cutting manual data collection effort by 70%.
- Designed reusable, scalable server-side data pipelines that transformed and stored extracted data into JSON/CSV for downstream analysis.
- Improved execution efficiency and system reliability through iterative testing and optimization of core processing logic.

Core Software Development Projects

Java, Python, MySQL | Jan 2025 – Present |

- Built multiple standalone applications applying core backend engineering principles, including algorithm design and structured data storage with MySQL.
- Implemented and optimized algorithms and database queries to improve runtime performance and memory efficiency.
- Practiced clean coding, debugging, and modular backend development while solving real-world problem scenarios with MySQL-backed data storage.

ACHIEVEMENTS

- Solved 80+ Data Structures & Algorithms problems on LeetCode — leetcode.com/u/fazilkhan21
- Achieved a 4-star rating in Java on HackerRank.
- Active GitHub contributor with multiple original software projects.

CERTIFICATIONS

- Python Programming Certification — 2024
- AI, NLP, RPA & Generative AI Program — 2024

EDUCATION

Master of Computer Applications (MCA) — East Point College of Higher Education, Bengaluru

CGPA: 8.4 / 10 | 2025
